To give you some indication though, we believe that the "market price" for a 85kW solar system at the moment is between: \$97,800.00 (on the lower end - e.g. cheap Chinese) to... \$148,800.00 (on the higher end - e.g. tier 1 solar panels and a German inverter - such as SMA).

Let's say you look at your monthly power bill and it says you consume on average 892 kWh in 31 days. So, $892/31/24 = 1.2$ kWh/hr Discharging from a battery has inefficiencies, lead around .88 and lithium .96 to .98. So, if you're using Lithium it's $1.2/.96=1.25$ kW/hr With that number we can see the power consumed per day is $24 \times 1.25 = 30$ kWh.
