inverters, which are connected to the medium voltage grid centrally. In certain conditions, the ABB central inverter"s topology allows a parallel connection directly to the AC side, enabling electricity to be fed to the grid via a single transformer. This avoids the need for each central inverter to have its own transformer, thereby saving cost

For conventional central inverter, the power loss caused by a fault can be equal to the total output power for the entire downtime. For modular inverter, only the faulty module stops, while other modules keep operating. This greatly reduces power loss under fault conditions. 500/630/1000kW Grid-tied PV Inverters
