Inverters are engineered to handle a specific input voltage, and using an inverter ...

So today I plugged in another tool battery charger that is rated to charge 20 volts batteries and the inverter worked fine, so far I tried 12v, 18v, 19.2v and 20v tool battery chargers and the inverter only works with 12v and 20v chargers. I ended up ordering another power inverter, hopefully it can accept all type of tool battery chargers.

Solar panels and batteries need similar ratings to work together. That means that 12V panels should be used with 12V batteries, and 24V panels should be used with 24V batteries. Unfortunately, 24V batteries are not widely available in the market, but you can get the same results by using two 12V batteries in a series connection.
