The FAA legal limit for carrying a power bank on a plane without additional permissions from the airline is 100 watt hours. To calculate the watt hours (Wh) of a power bank you use the voltage of the internal lithium cells, not the output voltage shown in the specification of the power bank. Lithium battery cells have a voltage of 3.6 volts.

3.7V Rechargeable Lithium Ion Battery Power Bank Cell Use for Led Light Bluetooth Speaker Emergency Light (3.7V 2500Mah Li-Ion Battery) 4.4 out of 5 stars 5 Price, product page INR320 INR 320 M.R.P: INR499

However, the voltage of a battery does affect the charger's output. For example, if you have a 5V charger and a 3.7V battery with a capacity of 2,000mAh, the charger will output 5V, but the battery will only receive 3.7V. This means that the charger will have to output more current to charge the battery to its full capacity.
