What is a 48 volt solar water pump?

A 48 volt solar water pump is a 1hp solar powered submersible pump that can be used for various applications such as irrigation, water tank, pool, livestock or farms. It has a maximum head of 56~95m (180~310ft) and a maximum flow of 925~1585 gallons per hour. The pump features a single-suction impeller, a 3 inch inlet diameter, and a 1.25 inch outlet diameter.

What is a 500 watt solar water pump?

A 500 watt solar water pump is a 48V DC motor pump with a maximum head of 45~109m (145~355ft) and a maximum flow of 449~1321 gallons per hour. It has an inlet diameter of 3 inch/4 inch and an outlet diameter of 0.75 inch/1.25 inch. This solar water pump can be used for deep well, small fountain, large pond, or water tank applications.

How a solar water pump works?

[Intelligent Water Shortage Sensors]: This solar water pump has an intelligent water shortage sensor, so it has an intelligent water shortage protection function. When there is no water in the well, the pump will automatically stop working. [Pump Motor]: The solar pump uses NSK bearing with permanent magnet brushless synchronous motor.

What is a solar water pump controller?

[High-quality controller]: The solar water pump controller utilizes MPPT technology to ensure maximum flow is delivered under all light conditions. It also protects the submersible pump from frequent start up in low light conditions, overheating & running dry with LED display to view working various condition.

What is the maximum head of a solar well pump?

Max. Head: 120m (393ft); This solar well pump is built with rust-resistant 304 stainless steel, the pump is highly resistant to corrosion. The high-precision rotor and NSK bearing can reduce friction for long-time use. Powerful flow with 7.9 GPM and the highest head can reach 393ft.

How to install a solar water pump?

Before installing a solar water pump, ensure the rope or cable is longer than the depth at which you want to install the pump. This is used to raise and lower the pump, never use the power cable for this. Use the DC controller to set the solar pump's running mode and speed. The solar water pump must be under water at all times and should have been pre-conditioned for at least 15 minutes.

This solar pump kit is suitable for pumping from 10 to 150 feet head (TDH), with daily water usage of 1500 to 3600 gallon. Package includes: 6x 100 Watts mono crystalline A-grade solar panel (may substitute with 2x 360W to 400W panels for USA address where available)

Sunrotor SR-6 ( 48V) Solar Submersible Pump/Motor Unit. For pumping from greater depths than the SR-4. The SunRotor DC Input Controller SRC-M100T (our item number SPP-03205) is required in order to operate this pump properly. Running this pump with any other controller can result in pump failure and will void the warranty on the pump.

Solar Water Pumps Flow and Lift. Solar water pumps are designed to provide a flow of water (GPM) for a given pressure or lift (head). Pump "head" is measured in feet, and represents the total lift the pump can raise water from a low point to a high point. Sometimes head is expressed as (PSI), and 1ft of head=0.433PSI.
