

# Are you the agent of outdoor power supply in Gambia

How much electricity will Gambia generate in 2025?

The Gambia's Electricity Sector Roadmap (2019-2025) aims to scale up electricity generation to 200 MW of available capacity at peak in 2025, with 14MW expected from the OMVG project with Guinea and Senegal, and 50MW from the Souapiti project and the remainder through Independent Power Producers (IPP).

Did Gambia import energy?

Gambia did not import energy. Energy sources, particularly fossil fuels, are often transformed into more useful or practical forms before being used. For example, crude oil is refined into many different kinds of fuels and products, while coal, oil and natural gas can be burned to generate electricity and heat.

How many people in Gambia do not have electricity?

In Gambia, 55% of the overall population does not have access to electricity and only 10% have access to clean cooking facilities.

Why are there so many power outages in Gambia?

For nearly five decades now Gambians have had to endure all too common voltage brownouts and power outages. These occurrences have seriously hampered the country's economic development efforts. Most businesses and the more affluent households rely on off-grid sources, such as Diesel Generators, to keep the lights burning.

What are the different types of energy transformation in Gambia?

One of the most important types of transformation for the energy system is the refining of crude oil into oil products, such as the fuels that power automobiles, ships and planes. No data for Gambia for 2021. Another important form of transformation is the generation of electricity.

Is the Gambia a poor state?

The Gambia's power sector is in a poor state. For nearly five decades now Gambians have had to endure all too common voltage brownouts and power outages. These occurrences have seriously hampered the country's economic development efforts.
