

Belgium Antwerp EK outdoor power supply 5 kWh

What is the main source of electricity in Belgium?

The main source of electricity in Belgium is nuclear power, which contributes significantly to the nation's energy mix. This is complemented by renewable energy sources such as wind and solar power, as well as natural gas. The blend of these sources ensures a steady and reliable supply of electricity across Belgium.

How much does it cost to charge an electric vehicle in Antwerpen?

It costs EUR3.35 to charge an electric vehicle in Antwerpen. If you are charging an electric vehicle once a day, it will cost you a total of EUR100.5 per month. If you decide to charge your electric vehicle every 2nd day, you would save EUR50.25. *This is based on charging an electric vehicle, and using 45 kWh.

What is the energy sector like in Belgium?

The country's energy sector is characterized by a balanced approach, combining renewable and conventional energy sources. The main source of electricity in Belgium is nuclear power, which contributes significantly to the nation's energy mix. This is complemented by renewable energy sources such as wind and solar power, as well as natural gas.

What is Belgium's energy policy?

Belgium, a key player in the European electricity landscape, relies on a diverse mix of energy sources to meet its electricity needs. The country's energy sector is characterized by a balanced approach, combining renewable and conventional energy sources.

Why is Belgium a good country for electricity?

Belgium's electricity network is well-connected with its neighboring countries, which include France, the Netherlands, Germany, and Luxembourg. This interconnectivity is a key aspect of the country's energy strategy. Through these connections, Belgium is able to import and export electricity, ensuring a more efficient and stable electricity supply.

Why is Belgium connected to the EU electricity grid?

Being connected to the EU electricity grid allows Belgium to engage in cross-border electricity trading. This integration facilitates the balancing of electricity supply and demand, not only within Belgium but across neighboring countries as well.

The energy prices shown are based on an electricity consumption of 1,600 kWh during the day and 1,900 kWh during off-peak hours and a gas consumption of 23,260 kWh per year. The energy prices are the expected annual costs based on the average energy prices of all commercial energy suppliers.
