To meet specific requirements, we offer two advanced photovoltaic (PV) glass technologies: amorphous silicon and crystalline silicon, both fully customizable. Crystalline silicon photovoltaic glass excels with the highest power output per square meter.

What is Photovoltaic Glass?

Our photovoltaic glass offers a cutting-edge solution for both new construction and renovation projects. When integrated into ventilated facades, this glass enhances building aesthetics while providing key benefits such as radiation protection, thermal and acoustic insulation, and improved occupant comfort.

Where can Photovoltaic Glass be used?

Our photovoltaic glass has already been installed in a wide variety of buildings in more than 350 projects worldwide. Buildings such as corporate offices, hotels, skyscrapers, airports, railway stations, government buildings, museums, and even historic buildings can benefit from our photovoltaic glass solutions.

What are double glass solar panels?

Double glass solar panels, also known as glass-glass or glass solar panels, are made up of two layers of tempered glass that cover both sides of the solar panel. The glass replaces the traditional aluminum frames and backsheet substrate. The two layers of glass are bonded together with a special encapsulant.

What are flexible solar panels?

Flexible solar panels are electricity-generating devices that use photovoltaic cells. They are made of ultra-thin silicon cells, which are typically a few micrometers wide. These cells are sandwiched between layers of protective plastic, rather than the glass and aluminum frame of traditional solar panels.
