In this project, we will make an 300W, 50/60 Hz Inverter using IC SG3525 with PWM Inverter Circuit. The circuit will take a 12V DC power supply from a 12V battery and converts it into 220V, 300W PWM output. An inverter is an electronic device that converts direct current (DC) electricity into alternating current (AC) electricity.

The AIMS Power 5000 Watt inverter with 240 volts AC output is a great choice for an off grid well pump that requires 240VAC to operate. However, keep in mind that this inverter is not a "split phase" 240VAC; you will not be able to pull one leg off to create 120VAC. The 240VAC supply is accomplished through one of the two AC receptacles, or the direct connect terminal block.

The 12v to 220v inverter circuit using MOSFET is one of the most popular and reliable methods of converting electricity from one voltage to another. This method makes use of MOSFETs (metal-oxide-semiconductor field-effect transistors) to convert the lower voltage of 12 volts to the higher voltage of 220 volts.

When an engineer requires to convert DC into AC power, there are several ways to make an inverter. So, we thought why not try making an inverter using a battery of 12 Volts? Just 12 volts and we can get 220V AC at the output. So, maybe the question arises that the circuit then needs a lot of components to boost up the voltage.
