Can a grid-tied inverter be installed outside?

Like most electronic devices, inverters operate more efficiently at cooler temperatures. While most grid-tied inverters are designed for outside installation, they should not be mounted in direct sunlight, as this will degrade their efficiency. In addition to the lost output, the lifetime of the unit is likely to be shortened.

Should inverters be shaded?

Thus, even inverters that incorporate robust outdoor packaging should be kept shaded, even if it means installing an awning over them. The ideal installation site for inverters is cool, dry, dust-free and indoors. However, there are a growing number of applications for which this is impractical or undesirable.
