

Inverter 12v to 21v

System has been in operation for almost two months now but a couple of time I have had a Low Voltage shutdown from the inverter due to the batteries coming down to 21v for more than 10 seconds. It has happened after a day of heavy use. The first time the load was 2807Wh, Battery discharge was 2431 and charge was 4096 with a PV input 4279.

A large pure sine wave inverter is extremely expensive and unnecessary. It's much more cost effective to buy a small, good quality PSW inverter for the things you need it for, such as battery charging. As I mentioned earlier, 600w is plenty for me to charge all my batteries. Then buy a larger 2,000w+ MSW inverter for things like power tools.

This document provides instructions for building a 12V to 15-21V car inverter for powering a notebook or laptop from a vehicle's 12V power supply. It uses a boost converter design with a UC3843 controller and MOSFET switch to efficiently step up the voltage in a single stage. Components like the inductor core and
