Product description. With the Y-adapter you can link two solar panels with universal MC4 output in parallel to each other. The energy yield is greater than when the panels are connected in series.

How does it work: The maximum power of 65W input will be achieved when the voltage is $\geq 20V$ with a minimum current of 3.25A. When the voltage is lower than 20V, the power will be maximized step by step. When a solar panel can supply a maximum of 18V, the maximum power will be 55W. When a panel can supply 15V, the power will be 45W, etc.
