If the new transistors fix the 36v supply that I have now, I could use that to power the little servo for the time being. Eventually, I will probably replace the little servo with a larger NEMA34 90v or 72v servo, but meanwhile, there must be some way to get 36V from a 72V transformer easily. I have ordered a pair of 9.1ohm 100watt resistors.
