Electric double layer capacitors and supercapacitors are a class of electrolytic (polarized) capacitors that offer exceptionally high capacitance values in relation to their physical size and low voltage ratings; individual devices have ratings of a few volts at most, though products incorporating numerous series-connected devices to achieve higher voltage ratings are available.

The most demanding circuitry in terms of power consumption will be found in the active suspension; a load-leveling solution incorporating a supercapacitor may be ideal. Price of course, will determine the method - either a 42 volt power supply or a supercapacitor will ultimately be used. Summary: Gaps and Showstoppers in Supercapacitor Technology
