Uninterruptible power supplies work by maintaining a continuous supply of electrical power to connected devices through one or more methods depending on the type of UPS. In the event of a power outage or significant power variation, the UPS instantaneously switches to battery power to provide uninterrupted electricity.

A uninterruptible power supply or uninterruptible power source (UPS) is an electrical apparatus that provides you with emergency power to a load when the input power source or mains power fails in cases of power outages or load shedding. A UPS differs from an emergency power system or standby generator as it provides near-instantaneous ...

A UPS (Uninterrupted Power Supply) is a backup battery that keeps the equipment plugged into it running in the event of a power outage. It's not just a glorified power bank, because the UPS detects interruptions in the power and automatically switches the connected devices to running off the UPS battery, so they don't shut down.

Include all of the devices the UPS will need to support. If a piece of equipment has a redundant power supply, only count the wattage of ONE power supply. If you are unsure how many watts your equipment requires, consult the manufacturer or power supply specifications in the user manual. Here is an example of an equipment list to verify the load:

The advantages of using an uninterrupted power supply include: Continuity: Ensure uninterrupted operation of critical equipment, from computers to factory production lines, without experiencing any power outages. ...
