algarve air conditioning, solar heating, solar energy, under floor heating and pool heating - air conditioner installs for the expatriate market and photo voltaic renewable energy solutions.

Generally, to run a small window air conditioner, which typically requires around 500 watts, you might need 3-6 standard solar panels, considering that residential panels range from 100 to 415 watts. For the same reason, running a central air conditioner that consumes more energy also requires more solar panels.

We're trying to use small PV (photovoltaic solar) cells and equip them with 18,000 BTUs (a unit of energy) of air conditioning,&quot; said Roger Pruitt, the president of SolCool and GPM, the research ...

The Hybrid AC/DC Solar Air Conditioner is a sustainable and energy-efficient cooling solution that uses both solar and traditional electricity to provide cool air. 100% energy saving in day time. ...

The first experimental results with a small scale solar driven ejector cooling system installed in Porto, Portugal are reported. The system is constituted by three sub-systems: solar collector field, cooling cycle and thermal energy distribution sub-systems. The novelty in the cooling cycle is a 1.5 kW nominal capacity variable geometry ejector using R600a as working ...

Heat pumps can either be air-to-water or ground-source type systems. In the Algarve, air-to-water systems are normally used. These operate in principle much like an air-con system, using an external unit which takes the outdoor ambient air and "upgrades" its temperature, then transfers this heat to water circulated underfloor or to radiators.
