Solar array watts / system voltage + 20% safety margin = charge controller size. You have solar panels connected in a series at 41V each. Multiply by 3 and that is 123V. Add 20% and you get 153. A 123V solar array needs either a solar controller with a 150 or 160 VOC capacity. Most 60A MPPT charge controllers can handle this output.

A complete set of solar power supply system (including battery), easy to use. Easy to install, can be matched with a variety of cameras. Efficient solar energy conversion rate. High-quality materials, such as tempered glass, EVA, waterproof solar panels, aluminum alloy wires, etc., Protect all components from harsh
