What is a supercapacitor?

A supercapacitor is a high-capacity capacitor with capacitance values much higher than other capacitors (but lower voltage limits) that bridge the gap between electrolytic capacitors and rechargeable batteries.

This paper proposes a capacitance estimation method of the supercapacitor bank in the supercapacitor energy storage system (SCESS). To diagnose a deterioration, the capacitance of the supercapacitor bank is estimated by using a current injection. The injected current causes an AC ripple voltage and AC ripple current in the supercapacitor bank, which are extracted by ...

The author in [130] designed a boost converter controller and tested a solar-supercapacitor light of 12 V, 100 W emitting diode (LED) from a 2.7 V 40000F supercapacitor bank. Fig. 16 illustrates the commercially available system connection diagram of supercapacitor-battery solar streetlight introduced by GTCAP company [131].

For the love of god, I couldn't find a satisfactory supercapacitor bank for a decent price, so I decided to roll my own. I found some reasonably priced single-cell 2.7V 100F supercaps that I plan to connect in series to get a 4-cell bank with 25F at 10.8V nominal. While researching the subject, I found out it's a good idea to also use some ...
