

T138 Portable Power Bank

Is voltaic systems V88 a good laptop power bank?

The Voltaic Systems V88 Portable Laptop Power Bank has all the necessary features that any great laptop power bank should have, including four outputs, passthrough functionality, and an easy-to-read LCD display for monitoring the battery level and voltage. It's fairly versatile, including 10 laptop adapters that should cover most users' needs.

How much power does a laptop power bank have?

With a maximum power of 130W and two DC outputs - not to mention a variety of DC adapters included - this power bank is compatible with many laptops. That makes it useful for households with multiple types of laptops and devices. Unfortunately, this isn't TSA-approved, due to its 185Wh, over the 100Wh TSA standard.

What features should you consider when buying a portable power bank?

Pass-through charging is another feature to consider; with it, you can charge your device and a portable power bank simultaneously. That's convenient if both your phone and backup battery are running on empty.

Can a power bank charge a laptop?

Power banks are most commonly intended to charge mobile devices such as cellphones, tablets, cameras, and portable speakers. They can also be used to charge laptops provided the ports allow for it and the power charging rate is compatible. Power banks are generally not suited to charging larger electronic devices in your home.

Do I need a power bank?

If you are charging a small smartphone, a simple power bank will suffice. If you plan on charging a laptop occasionally as well, or many devices at once, you'll want a power bank with more power and more features.

How fast can a power bank charge a device?

How fast your power bank can charge a device is dependent upon the available output of the power bank and the available input of the device. Without getting too much into the electrical details, a standard 3,000mAh device such as a smartphone can be expected to charge in about 90 minutes by most power banks.
