The equation for the rotational kinetic energy is of the same form of the above except it is slightly different. It is:  $E = \frac{1}{2} I \omega^2$  where  $I$  is the moment of Inertia given by  $I = m r^2$  where  $m$  is the mass and  $r$  is the radius.  $\omega$  is the angular velocity given by  $\omega = v/r$  where  $v$  is the rotational velocity and  $r$  is the radius about which the object is rotating.. This is just a simplified explanation ...
